Data Processing

Question 1: Reading in Data

```
edu01a <- read_csv("EDU01a.csv", show_col_types = FALSE) |>
  select(
    area_name = Area_name, #rename Area_name
    STCOU,
    ends_with("D") #select all columns ending in "D"
  )

#display the first 5 rows
edu01a |>
  slice(1:5)
```

```
# A tibble: 5 x 12
  area_name     STCOU EDU010187D EDU010188D EDU010189D EDU010190D EDU010191D
  <chr>         <chr>      <dbl>      <dbl>      <dbl>      <dbl>      <dbl>
1 UNITED STATES 00000   40024299   39967624   40317775   40737600   41385442
2 ALABAMA       01000     733735     728234     730048     728252     725541
3 Autauga, AL   01001       6829       6900       6920       6847       7008
4 Baldwin, AL   01003      16417      16465      16799      17054      17479
5 Barbour, AL   01005       5071       5098       5068       5156       5173
# i 5 more variables: EDU010192D <dbl>, EDU010193D <dbl>, EDU010194D <dbl>,
#   EDU010195D <dbl>, EDU010196D <dbl>
```

Question 2: Pivot Data

```
edu_long <- edu01a %>%
  pivot_longer(
    cols = ends_with("D"),
    names_to = "surveyID_full", #store original column names (ex. "EST1234D")
    values_to = "enrollment"
  )

#display the first 5 rows
head(edu_long, 5)
```

```
# A tibble: 5 x 4
  area_name     STCOU surveyID_full enrollment
  <chr>         <chr> <chr>              <dbl>
1 UNITED STATES 00000 EDU010187D      40024299
2 UNITED STATES 00000 EDU010188D      39967624
3 UNITED STATES 00000 EDU010189D      40317775
4 UNITED STATES 00000 EDU010190D      40737600
5 UNITED STATES 00000 EDU010191D      41385442
```

Question 3: Extracting the year

```
long_updated <- edu_long %>%
  mutate(
    #extract the 2-digit year from the 8th and 9th characters of surveyID_full
    surveyID_year = substr(surveyID_full, 8, 9)
    ) %>%
  mutate(
    #convert the 2-digit year into a 4-digit year (assuming all are 1900s)
    year = as.numeric(paste0("19", surveyID_year))
  ) %>%
  mutate(
    #extract the survey ID (first 7 characters of surveyID_full)
    surveyID = substr(surveyID_full, 1, 7)
  ) %>%
  #remove the temporary intermediate column
  select(-surveyID_year)
```

```r
#display the first 5 rows
head(long_updated, 5)
```

```
# A tibble: 5 x 6
  area_name     STCOU surveyID_full enrollment  year surveyID
  <chr>         <chr> <chr>              <dbl> <dbl> <chr>
1 UNITED STATES 00000 EDU010187D      40024299  1987 EDU0101
2 UNITED STATES 00000 EDU010188D      39967624  1988 EDU0101
3 UNITED STATES 00000 EDU010189D      40317775  1989 EDU0101
4 UNITED STATES 00000 EDU010190D      40737600  1990 EDU0101
5 UNITED STATES 00000 EDU010191D      41385442  1991 EDU0101
```

Question 4: Identifying County Data

```r
#identify county rows: ", XX" (where XX is a two-letter state abbreviation)
county_indices <- grep(pattern = ", \\w\\w", long_updated$area_name)

#create county tibble and assign custom classes
county_tibble <- long_updated[county_indices, ]
class(county_tibble) <- c("county", class(county_tibble))

#create non-county tibble and assign custom classes
state_tibble <- long_updated[-county_indices, ]
class(state_tibble) <- c("state", class(state_tibble))

#display the first 10 rows for both data sets
head(county_tibble, 10)
```

```
# A tibble: 10 x 6

```

Question 5: Add `state` Variable to the County Tibble

```
county_tibble <- county_tibble |>
  mutate(
    #use nchar to get the last 2 characters of area_name
    state = substr(area_name, nchar(area_name) - 1, nchar(area_name))
  )

#display the first 5 rows
county_tibble |>
  slice(1:5)
```

```
# A tibble: 5 x 7
  area_name   STCOU surveyID_full enrollment  year surveyID state
  <chr>       <chr> <chr>              <dbl> <dbl> <chr>    <chr>
1 Autauga, AL 01001 EDU010187D          6829  1987 EDU0101  AL
2 Autauga, AL 01001 EDU010188D          6900  1988 EDU0101  AL
3 Autauga, AL 01001 EDU010189D          6920  1989 EDU0101  AL
4 Autauga, AL 01001 EDU010190D          6847  1990 EDU0101  AL
5 Autauga, AL 01001 EDU010191D          7008  1991 EDU0101  AL
```

Question 6: Add `division` Variable to the Non-county Tibble

```
state_tibble <- state_tibble %>%
  mutate(
    state = substr(area_name, nchar(area_name) - 1, nchar(area_name)),
    division = case_when(
      state %in% c("CT", "ME", "MA", "NH", "RI", "VT") ~ "New England",
      state %in% c("NJ", "NY", "PA") ~ "Mid-Atlantic",

      state %in% c("IL", "IN", "MI", "OH", "WI") ~ "East North Central",
      state %in% c("IA", "KS", "MN", "MO", "NE",
                   "ND", "SD") ~ "West North Central",

      state %in% c("DE", "DC", "FL", "GA", "MD", "NC",
                   "SC", "VA", "WV") ~ "South Atlantic",
      state %in% c("AL", "KY", "MS", "TN") ~ "East South Central",
      state %in% c("AR", "LA", "OK", "TX") ~ "West South Central",

      state %in% c("AZ", "CO", "ID", "MT", "NV",
                   "NM", "UT", "WY") ~ "Mountain",
      state %in% c("AK", "CA", "HI", "OR", "WA") ~ "Pacific",

      TRUE ~ "ERROR"  #return error for non-states like "UNITED STATES"
    )
  ) |>
  #remove the temporary intermediate column
  select(-state)

#display the first 5 rows
state_tibble |>
  slice(1:5)
```

```
# A tibble: 5 x 7
  area_name     STCOU surveyID_full enrollment  year surveyID division
  <chr>         <chr> <chr>              <dbl> <dbl> <chr>    <chr>
1 UNITED STATES 00000 EDU010187D      40024299  1987 EDU0101  ERROR
2 UNITED STATES 00000 EDU010188D      39967624  1988 EDU0101  ERROR
3 UNITED STATES 00000 EDU010189D      40317775  1989 EDU0101  ERROR
4 UNITED STATES 00000 EDU010190D      40737600  1990 EDU0101  ERROR
5 UNITED STATES 00000 EDU010191D      41385442  1991 EDU0101  ERROR
```

Requirements: Repeating Process with 2nd Component of Data Set

Create a Function for Steps 1 and 2

```
#read in the data set
edu01b <- read_csv("EDU01b.csv", show_col_types = FALSE)

select_pivot <- function(data, column = "enrollment") {
  data |>
    #step 1
    select(
      area_name = Area_name,
      STCOU,
      ends_with("D")
    ) |>
    #step 2
    pivot_longer(
      cols = ends_with("D"),
      names_to = "surveyID_full",
      values_to = column
    )
}

#test the function to see if it works correctly
edu_long <- select_pivot(edu01b)

#display the first 5 rows
edu_long |>
  slice(1:5)
```

```
# A tibble: 5 x 4
  area_name     STCOU surveyID_full enrollment
